0-5 DAYS

Contents

PRODUCT

- Glycolic Resurfacing Cleanser sample packette
- Hydra-Bright Pro 5 Liquid Exfoliant
- Peel Prep
- Barrier Balm sample packette
- GlyPro AHA Resurfacing Peel
- Peel Neutralizer
- GlyPro Retinol Drops
- Remedy Gel sample packette

ACCESSORIES

- Glycolic Applicator
- (2) Cotton Swabs
- (3) 2x2 Gauze Pads
- Mask Cup
- (2) Glo Reusable Cotton Rounds
- Glo Headband

Kit includes all products and accessories to perform a complete at-home peel.

Instructions

1. Cleanse face with **Glycolic Resurfacing Cleanser**, avoiding the eye area.

2. Saturate one **2x2 gauze pad** with **Hydra-Bright Pro 5 Liquid Exfoliant** (use about half of the bottle). Swipe evenly all over the face, then discard gauze pad. Allow to dry for about 30 seconds, then saturate the second **2x2 gauze pad** with remaining **Hydra-Bright Pro 5 Liquid Exfoliant** and repeat application. Discard gauze pad and allow the face to dry.

3. Saturate one **2x2 gauze pad** with **Peel Prep**. Swipe evenly all over the face, avoiding the eye area. Discard gauze pad and allow the face to dry. You may have remaining product, this can be discarded.

4. Protect sensitive areas of the face with **Barrier Balm**. Use **cotton swabs** to apply around each eye, nostrils, lips and earlobes. Apply to any additional sensitive areas as needed.

5. Pour contents of **GlyPro AHA Resurfacing Peel** into **Mask Cup**.

Dip **Glycolic Applicator** (looks like a large q-tip) into peel formula to saturate. Apply one even layer of peel to skin, avoiding eye area and any area protected by **Barrier Balm**. Resaturate **Glycolic Applicator** as needed during application. When you have achieved an even, single layer, discard **Glycolic Applicator** and any remaining peel solution. Leave on skin for 2-5 minutes; while peel is on skin, monitor activity: this is an active formula so a light tingling sensation and slight flushing is normal and to be expected. However, if you experience uncomfortable stinging or burning and/or significant redness at anytime, proceed to neutralize (next step).

6. Deactivate peel. Shake **Peel Neutralizer** well, then saturate (1) **Glo Reusable Cotton Round** (use about half of the bottle). Swipe over the face. Saturate the second **Glo Reusable Cotton Round** with remaining **Peel Neutralizer** and repeat application. Note: neutralizing a peel adjusts the skin's pH, this may feel like a quick

tingling sensation on the skin but should subside quickly (less than 30 seconds). If you continue to feel any activity on the skin after using **Peel Neutralizer**, you can rinse the skin with cold water, allow skin to dry and then apply **Remedy Gel** (sample packette included).

7. Assess your skin 1-2 minutes after neutralizing the peel and it is dry to the touch:

- If flushing and activity is little to none, apply an even layer of **GlyPro Retinol Drops** to enhance your peel treatment. Then, continue to use **GlyPro Retinol Drops** 2-5 nights per week for additional smoothing and brightening benefits.
- If flushing and/or activity is moderate, wait 24 hours before applying **GlyPro Retinol Drops** at night. Continue to use **GlyPro Retinol Drops** for 1-3 nights per week for additional smoothing and brightening benefits.

POST PEEL CARE TIPS

- Do not vigorously rub the skin, use mechanical scrubs or pick at the skin.
- Do not exercise for 24-48 hours post peel. Avoid heat, steam and humidity (especially directly to face). Do not wax or use depilatories for 7 days post peel.
- Apply sunscreen with SPF 30 or higher for a minimum of 14 days post peel (Note: we recommend wearing spf every day, all year long)
